Title : Lateral Ventricles and Their Relationship to the Nucleus Caudatus in Projections on the Fissures of Lateral and Upper Surfaces on the Cerebral Hemispheres.

Orig Pub : Ceskosl. morf., 1956, 4, No. 3, 181-195

Abstract : In 50 hemispheres of the cerebrum of man, variability of the central and Sylvian fissures (SF) was noted; the form and size of the right ventricle are more variable than those of the left. In horizontal projection, Monroe's foramen is placed at the point of crossing of the continuation of the cerebral fissure and SF. In a brain with a relatively low temporal lobe, the projection of Monroe's foramen lies over

1856. JELÍNEK R. Otorhinolaryngol. klin. PU, Olomouc. "TBC v adenoidních vegetacích" F. 1954, Tuberculosis in adenoid vegetations during 1954 ČAS. LÉK. ČES. 1956, 95/9 (247-249)

During 1954 1,233 adenotomies and 135 tonsillectomies were carried out. Tuberculous adenoid vegetation was found in 0.9% and tb tonsils in 1.5%. In one tonsil and adenoid vegetation the tb infiltration was only discovered on serial sections. The lymphatic Waldeyer circuit is comparatively often the entry route for tb infection and may be the cause of cervical lymphomata, tb of the lungs, bones and joints. Tonsillectomy and adenoidotomy is indicated in the case of tonsils suspected of tb infection, for in this way the tuberculous focus is eliminated from the organism and thereby further tb dissemination made impossible.

"The Influence of Testicular Desoxyribonucleoproteins on Spermatogenesis."

Prague, Ceskoslovenska Fysiologie, Vol 15, No 5, Sep 66, p 391

Abstract: Antispermatic activity of desoxyribonucleic acids (DNA) and desoxyribonucleoproteins (DNAP) isolated from testicles of adult bulls, boars and rabbits was tested. Injection of 40 mg of DNAP introduced into testicles reduced the size and weight of the testicles to 1/3 of the original size in 2 to 3 weeks. Sexual activity was not influenced. The spermatozoa of such males were pathologically altered. Injection of 30 mg of DNA did not influence the testicles. 3 Western references. Submitted at 3 Days of Physiology of Domestic Animals at Liblice 10 Dec 65.

PHASE I BOOK EXPLOITATION CZECH/2439

International Polarographic Congress. 1st, Prague, 1951
Sborník I. Mezinárodního polarografického sjezdu. Díl 3: Klívná referaty přednesené na sjezdu. Proceedings... Vol. 3: Reviews Read at the Congress. Praha, Přírodovědecká vyd.-v. [1952] 774 p. 2,000 copies printed.

Resp. Ed.: Jiří Koryta, Doctor; Chief Ed. of Publishing House: Milan Skalník, Doctor; Tech. Ed.: Oldřich Důnka.

PURPOSE: The book is intended for chemists, chemical engineers, and physicists.

COVERAGE: The book is a collection of reviews and original papers read at the International Polarographic Congress held in Prague in 1951. Use of polarography in organic and inorganic chemistry, biochemistry, medicine, and industrial chemistry are discussed. In the section "Reviews" the papers presented at the Congress, either German or English, are translated into Russian and presented. In the section "Translations of each review are only those translations in Russian, German, and English which have not been published in Volume I are presented. The following scientists participated in the Congress: Professor Miltor Kemula, Dean of the Faculty of Sciences, Warsaw; Doctor Jaroslav Dolanský, Minister of Planning; Professor Jaroslav Herovský, Chairman of the Congress; and Professor Jaroslav Fukatko, Chairman of the Center for Scientific Research and Technical Development. References follow each paper.

TITLE: Agitator for epoxy resin compounds

PERIODICAL: Referativnyy zhurnal, otdel'nyy vypusk, 47. Khimicheskoye i kholodil'noye mashinostroyeniye, no. 2, 1963, 63, abstract 2.47.379 P (Czech. pat. 39 a, 19/07, no. 100806, September 15, 1961)

TEXT: An agitator is described consisting of two drums which are disposed one over the other: a vertical and a horizontal one equipped with thermostats to maintain the given temperatures. After the epoxy resin has been agitated with the filler in the stationary drum with rotating shovels, the mixture obtained is fed to the horizontal rotating drum with bevel bottoms. After a hardener has been added to the mixture, the horizontal drum is hermetically sealed and air is evacuated from its internal cavity through the channels of the driving shaft. After the required evacuation has been reached, the valve in the vacuum line is closed and the horizontal drum rotated. The components are mixed with the aid of a stationary perforated mixer and a scraper kept in the

gynaecology

By means of hysterosolpingography it is possible to observe various functional states of the uterus in small laboratory animals (mice, rats, guinea-pigs). It is possible to demonstrate (1) the physiological development of the uterus during puberty and pregnancy; (2) the growth-effect of oestrogenic substances; (3) the specific activities of various substances which are manifested secondarily, e.g. through the change in mobility of the uterus; (4) the effect of substances directly provoking contractility of the myometrium (e.g. oxytocin).

A new method for evaluating the effectiveness of secretin in rats is described. After opening of the abdominal cavity, the common outlet of the pancreatic and bile ducts is ligated. After 48 hr. the common orifice becomes enlarged to such a degree, owing to congestion, that on making an incision in the wall it is possible to insert a narrow cannula connected by rubber tubing to a glass pipette. The amount of secretion which enters the pipette is read every 30 min. The increase in secretion

2079

following the administration of secretin is determined by comparison with the values of resting secretion. The method is at least as accurate as other methods used hitherto and is simpler, quicker and cheaper.

"Contrast Media. IV. New Derivatives of 3,5-Diiodo-4-pyridone."

Prague, Ceskoslovenska Farmacie, Vol 16, No 2, Feb 67, pp 92-95

Abstract [Authors' English summary modified]: Preparation of new contrast media based on 2,5-diiodo-4-pyridine-N-alkane acids was investigated. Methyl 3,5-diiodo-4-pyridone-N-valerate, capronate, caprylate, and laurate and their n-butyl, n-amyl, n-octyl, N-dimethyl aminoethyl and hydroxyethyl esters were prepared. Their biological behavior was tested on rabbits; some of the substances showed toxic effects. 1 Figure, 6 Western references.

Title : Bulk Polymerization at Low Temperatures

Orig Pub: Plaste und Kautschuk, 1955, Vol 2, No 10, 222-
223 (in German)

Abstract: The bulk polymerisation of methylmethacrylate
(I) with p-tolylsulfonic acid (II) at 20-25°
proceeds without an induction period; the applica-
tion of hydroquinone or of resorcinol as an
inhibitor does not slow down the reaction, and
in some cases even accelerates it. The reaction

polymers. Plastics

Abs Jour: Ref Zhur-Khimiya, No 3, 1957, 9829

Abstract: rate depends both on the concentration of II and
on its reactivity (the presence of traces of HCl
markedly increases the activity of II); a large
excess of air or of molecular O₂ suppresses
the polymerisation of I. The presence of benzoyl
peroxide accelerates the polymerisation, presum-
ably because of the formation of a reduction-
oxidation system. In the presence of 0.1% ben-
zylhyponitrite the reaction goes 34 times faster
than when an equal amount of benzoyl peroxide is
used. The bulk polymerisation of I at low tem-
peratures is not as exothermic as at the usual temperatures,
hence the vapour pressure of I is markedly increas-
ed and nonhomogeneous products are formed. Not-
withstanding a number of obvious advantages, the
low-temperature bulk polymerisation of I until

Title : The Carriers in Dyeing Fibers Made from Polyethylene
Terephthalate.

Orig Pub : Chem. prumysl. 1958, 8, No 5, 272-275

Abstract : The factors are discussed which determine the efficiency
in application, advantages and shortcomings of the indi-
vidual carriers. New varieties of carriers are suggested
which do not lower the color fastness: diethyl and dime-
thyl esters of terephthalic acid and n-butyl ester of
salicylic acid. The dimethyl terephthalate is more econo-
mical for use in the Cz. S. R. [Czechoslovakian Soviet
Republic ?]

TITLE : The Effect of the Carriers on the Mechanical
Properties of Polyethyleneterephthalic Fibers

ORIG. PUB. : Chem Prumysl, 8, No 8, 445-446 (1958)

ABSTRACT : The effect of diphenyl, solvent naphtha, methyl
salicylate, and o-phenylphenol, used as carriers
in the dyeing of polyethyleneterephthalic [Tery-
lene, Dacron] fibers, on the mechanical proper-
ties of the latter has been investigated. It
has been found that the carriers do not affect
the strength of the fibers and increase their
elongation when used in concentrations of 4 gms/
liter under standard conditions.

Diffusion of dispersion dyes into poly(ethylene terephthalate) fibers. Zdeněk Petrů and Zdeněk K. Jelinek (Výzkumný ústav organických syntéz, Pardubice-Kybitví, Czech.). Chem. průmysl 8(33), 606-8(1958).—Diffusion coeffs. were measured in dyeing 250- μ -thick Terylene films at the boiling temp. with a soln. contg. 0.8 g. dye, 0.5 g. Syntapon L, and 0.5 g. Irgasol DA/1. After 90 min. the films were cut into 40- μ -thick slides, and the depth of penetration was detd. microscopically. The dyes studied were deriva. of azobenzene, 1-aminoanthraquinone, and 1,4-diaminoanthraquinone. The effect of structure and mol. wt. was investigated. Dye components of different shades in mixts. should have diffusion coeffs. of the same order to achieve homogeneous color. The effect of solvent addn. was studied.

Decomposition of diazoketones with cupric oxide. VIII. Preparation of aliphatic β -acrylacrylic acids. I. Ernest and H. Felinková (Vysoká škola chem. technol., Prague). Collection Czechoslov. Chem. Commun. 24, 3341-7 (1959) (in German); cf. C.A. 52, 11806b. —Decompn. of the mixt. of diazoketones RCOCHN_3 , Me (I) or Et (II) diazoacetate and CuO powder in C_6H_6 at $70-80^\circ$ gave alkyl β -acrylates $\text{RCOCH:CHCO}_2\text{R}'$ (III) (possessing probably the trans configuration as shown by the absorption max. at 962 cm^{-1} of the Et esters), (R, R', m. or b.p., n_D^{20} and % yield given): Pr, Me (IV), m. 37.5° , —, 8; Bu, Et, b. $90-3^\circ$, 1.4522, 19; Am, Et, b. $99.5-100^\circ$, 1.4532, 14; $n\text{-C}_6\text{H}_{13}$, Et, b. $110-13^\circ$, 1.4542, 19; $n\text{-C}_8\text{H}_{17}$, Et (V), b. $127-9^\circ$, 1.4567, 16. Me (VI) or Et (VII) fumarates and sym. diketones RCOCH:CHCOR were obtained as by-products in some cases; if fractionation failed, hydrolysis of the crude mixt. was applied. Heating 30 g. $n\text{-C}_6\text{H}_{13}\text{COCHN}_3$, 20.7 g. II, 1000 ml. C_6H_6 , and 2 g. CuO powder with agitation in a water bath at 70° led to a violent decompn.; refluxing then the mixt. 15 min., sepg. the CuO , and evap. the filtrate *in vacuo* gave a residue from which was isolated 5.2 g. dilaurylolethylens, m. 80.5° (MeOH) and 34.5 g. liquid; the latter was fractionated to give 6.3 g. VII and 6.3 g. V. Analogous decompn. of 13 g. PrCOCHN_3 (VIII) and 12.1 g. II gave a mixt. of VII and $\text{PrCOCH:CHCO}_2\text{Et}$ (could not be sepd. by distn.) whereas 21 g. VIII, 12.7 g. I, 600 ml.

C_6H_6 , and 1 g. CuO gave on fractionation of the crude product (27.5 g.) 5.2 g. VI, m. 102° , and 2.45 g. IV, m. 37.5° (MeOH at -20°). Decompn. of EtCOCHN_3 and I gave a mixt. which could not be sepd. by distn. Decompn. of 10 g. N_3CHAc , 13.5 g. II, 500 ml. C_6H_6 , and 1 g. CuO gave 1.3 g. AcCH:CHAc , m. $74-5.5^\circ$ [bis(dinitrophenyl)hydrazone m. $290-1^\circ$ ($\text{C}_6\text{H}_5\text{N-EtOH}$)] and $\text{AcCH:CHCO}_2\text{Et}$ (dinitrophenylhydrazone m. 144°). Decompn. of 12 g. EtCOCHN_3 , 9.5 g. II, 500 ml. C_6H_6 , and 1 g. CuO gave $\text{EtCH:CHCO}_2\text{Et}$ isolated as 110 mg. dinitrophenylhydrazone, m. 219° ($\text{C}_6\text{H}_5\text{N-EtOH}$) (decompn. at 225°). Hydrolysis of III with 10:1 (vol.) AcOH-concd. HCl by 1 hr. reflux gave $\text{RCOCH:CHCO}_2\text{H}$ (R, m.p., and % yield given): Pr, 99° (cyclohexane), 98; Bu, $98-9.5^\circ$ (aq. AcOH), 81; Am, 110° (aq. AcOH), 90; $n\text{-C}_6\text{H}_{13}$, 107° (aq. AcOH), 93; $n\text{-C}_8\text{H}_{17}$, 114° (aq. AcOH), 81. Breusch and Keakin (cf. C.A. 43, 3785a; 43, 2904d) gave surprisingly higher m.p. values. Hydrogenation of III in EtOH on PtO_2 , Pd-CaCO_3 , and Pd-BaSO_4 , resp., gave $\text{RCOCH}_2\text{CH}_2\text{CO}_2\text{Et}$ (IX) in 90-8% yields (Et given): Bu, b. $78-80^\circ$; Am, b. $90-2^\circ$; $n\text{-C}_6\text{H}_{13}$, b. $99.5-100^\circ$; $n\text{-C}_8\text{H}_{17}$, b. $109-110^\circ$. Analogously to that of III hydrolysis of IX gave $\text{RCOCH}_2\text{CH}_2\text{CO}_2\text{H}$ (R, m.p. (cyclohexane), and % yield given): Bu, $52-3^\circ$, 80; Am, 74° , 76; $n\text{-C}_6\text{H}_{13}$, 70.5° , 83; $n\text{-C}_8\text{H}_{17}$, $77-0^\circ$, 93.

* Identification of B-haemolytic streptococci (Czech text) CSL. HYG. EPID. MIKROB. 1953,
2/2 (132-138)

The technique of collecting and inoculating specimens and the importance of the medium are discussed. By means of immediate inoculation, use of enriching media and other factors discussed, B-haemolytic streptococci were isolated in 98.14% of clinically diagnosed scarlet fever cases. This supports the streptococcal aetiology of the disease.
